

What an exciting and busy Autumn term we've had!

The children have been occupied with studying human and physical geography, rocks, soils, and the Stone Age. Along with investigating natural colours and charcoal in art, we have learned how to make some amazing pillows in D&T using running and cross stitch.

In PE, the children have had fun utilising the wall bars and showcasing their dance skills. We had fun studying the words to "Let's Harvest" and joining the rest of the school for a performance in the church.

This week, we have been learning about friction by investigating how different surfaces affect the distance an object can travel. The children set up their equipment and chose which materials to test. We also sorted a range of objects based on their magnetic properties.

Among the topics we will cover next term are the human skeleton, pneumatic systems, and the Romans.
